Helpmefindthejob — Application appendix (one page)

PlanTowardPerfection box 1.4.9 + 1.2.5. Optional Field 17 attachment.

1. Persona panel (Decision 21, seven personas)

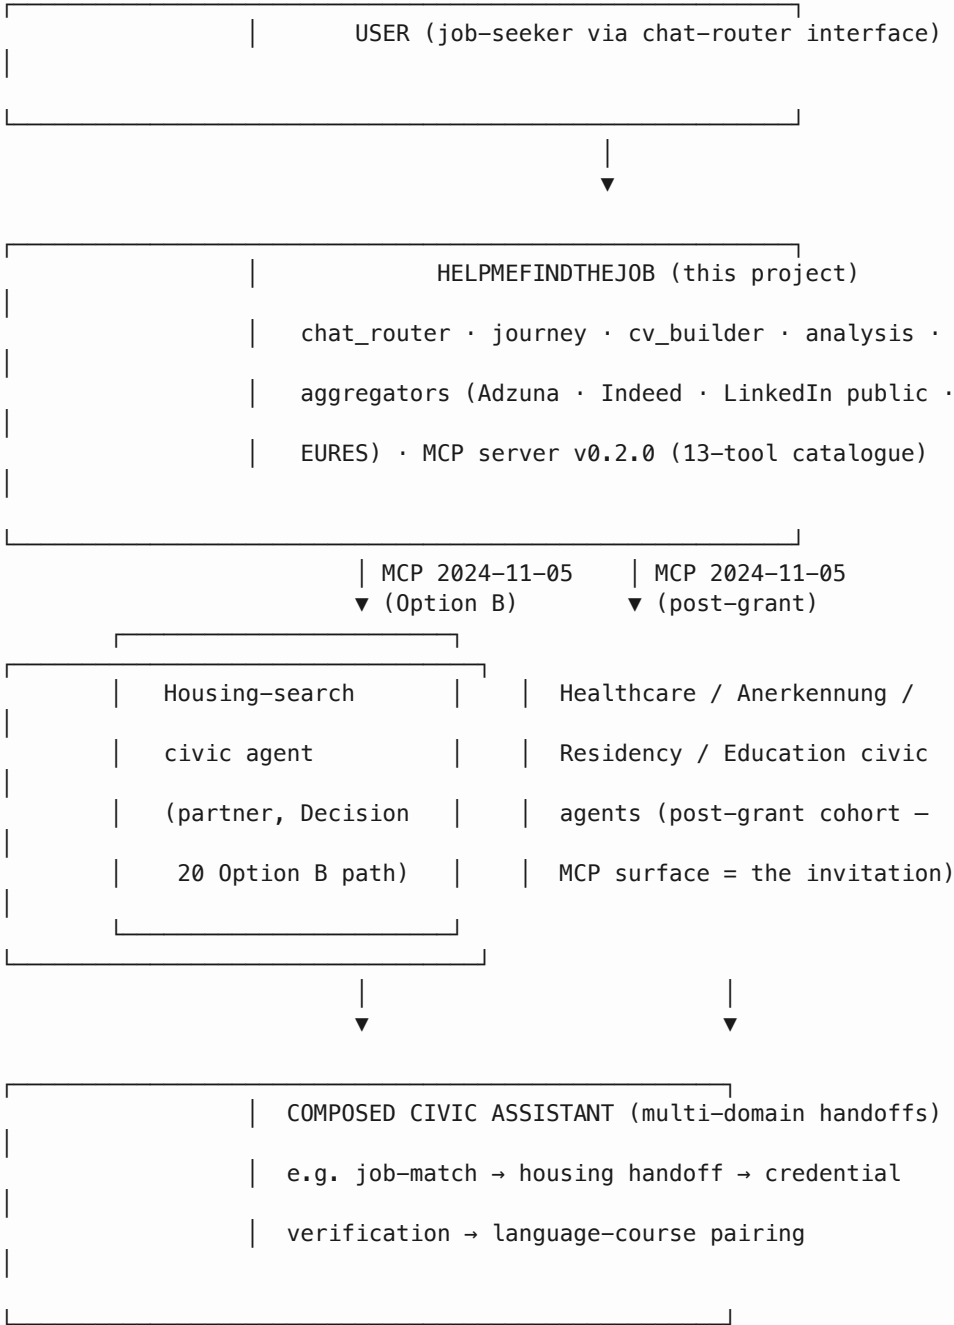

The system is designed against seven concrete personas. The five most-acute migrant personas (rows 1–5) are the **primary narrative anchor** — every demo, screenshot, and proposal section names one of them first. The two wider friction-class personas (rows 6–7) demonstrate the architecture is friction-driven, not demographic-driven.

#	Persona	Origin	Profession + Status	Lang.	Solves
1	Aïcha	Tunisia	Registered nurse, §16d Anerkennun g	B1→B2 DE	Recognition-friendly employer matching + clinical-German CV
2	Yusuf	Turkey	Mechanical engineer, EU Blue Card pending	A2 DE	Post-arrival timeline + cross-city role comparison
3	Olga	Ukraine	Senior frontend dev, §24 protection	A2 DE	English-team / remote tech + residence explainer
4	Mahmoud	Syria	Trade apprentice, Subsidiärer Schutz	B2 DE	Ausbildung aggregation + Handwerk-format CV
5	Maria	Romania	Care worker, EU citizen	A2 DE	Language-tolerant Pflegedienst matching
6	Käthe	Germany	Returning nurse, 12-yr caregiving gap	Native DE	12-year-gap CV reframing + Wiedereinstiegsprogramm e matching
7	Tobias	Germany	Career changer, long-term unemployed	Native DE	Evidence-of-ROI cover-letter framing for non-linear careers

Source-of-truth: docs/grant/07-personas.md + Decision 21 in docs/grant/04-research-and-decisions.md. Persona records encoded in company_discovery/persona_fixtures.py and consumed by both

tests/test_bias_methodology.py (bias re-test) and scripts/seed-personas.py (demo deployment seed).

2. MCP composition diagram (Article 11 + Annex IV positioning)

Standards anchored: ESCO (occupations + skills), EURES (schema), schema.org/JobPosting, MCP 2024-11-05, JSON Schema 2020-12, WCAG 2.2 AA target, RFC 9116 security.txt, GDPR + EU AI Act Article 12 audit-log spec, Apache 2.0 licence + CLA.

3. Budget breakdown (€37,000 across 6 milestones)

#	Milestone	Cost	Article(s) addressed	Status
1	Legal + governance	€4,000	Apache 2.0 + DCO + CC	Shipped

	pack (Apache 2.0, CLA, NOTICE, TRADEMARK, governance files)		compliance	
2	MCP composition reference (13-tool catalogue + JSON schemas + CI test)	€8,000	MCP 2024-11-05	Shipped
3	EU AI Act compliance pack (14 documents in compliance/)	€10,000	Art. 9 · 10 · 11+Annex IV · 12 · 13 · 14 · 15 · 22 · 26 · 27 · 49 · 50 · 73 · 86 + GDPR Art. 5 · 20 · 22 · 28 · 30 · 32 · 33 · 35	Shipped (this slice 2026-05-24)
4	Public demo + accessibility (mkdocs site + WCAG 2.2 AA evidence + persona-seeded demo)	€6,000	WCAG 2.2 AA + Article 49 EU AI database	Demo deployment in flight (DNS gated); accessibility evidence shipped
5	Reproducible builds + supply-chain (Nix flake + cosign + SBOM + Scorecard)	€5,000	SLSA Level 2 (planned) + RFC 9116	Shipped
6	Institutional readiness + standards interop (ESCO 30-occupation / 50-skill reference + EURES projection + ≥1 letter of support + Commons Conservancy admission)	€4,000	Cross-references all of the above	Conservancy intake submitted (parallel track); outreach drafted, send-gate at submission window
TOTAL		€37,000	(≤ €50,000 first-proposal cap; frugal-by-default per Decision 10)	

Cost-saving doctrine: every milestone is evaluated against “does it reduce institutional operational cost while improving end-user outcomes?”. The Milestone-3 compliance pack alone is documented to avoid €30,000–€200,000 of AI-Act-consulting cost per deployer (industry estimate; see verification table in the application body for the honest framing).

4. Cross-references

- Application body: docs/grant/application-draft-2026-05-19.md (22 of 22 fields filled)
- Verification table: same file, “Per-numerical-claim verification table” section

- Decisions log: docs/grant/04-research-and-decisions.md Part B
- Compliance INDEX: compliance/INDEX.md
- Risks the project acknowledges: same body, “Risks we acknowledge” section between Field 16 and Field 17
- Honest-state paragraph: docs/grant/04-research-and-decisions.md Part B
“What we know is broken / not yet shipped (2026-05-24)”

This appendix is rendered into a PDF via:

```
pandoc docs/grant/application-appendix-2026-05-24.md \  
-o docs/grant/application-appendix-2026-05-24.pdf \  
--pdf-engine=xelatex \  
-V mainfont="Helvetica" \  
-V geometry:margin=2cm
```

If the operator’s environment lacks pandoc / xelatex, the markdown source above is itself a usable reviewer artefact — every claim is hyperlinked into the repository structure.
